

Art of packaging ...

We are the leader in industrial packaging in Central Europe

“You can pack anything with us. Reliably!”

International presence

We have no boundaries and we always find a solution. For each product we will find the best way to pack it. To achieve first-class results, we use an innovation and development centre, a material and packaging testing room, as well as entire production plants and logistics centres. We make work easier for small and large companies not only throughout Europe. We also have long-term clients outside the Czech Republic, for example in Germany, Turkey, Slovakia, Poland, Italy, Spain, even in Morocco or the USA.

Since 1991

We have been involved in industrial packaging for a really long time. We have built a strong and stable business during that time. Our strengths are first-rate know-how, quality production and professional service. That is why we have maintained a high standard of all our products and services over many years.

Comprehensive services tailored to your needs

You know what you need to pack and everything else is up to us. Thanks to our first-rate service, you will save time, costs, manpower and space in your warehouses. We approach each project individually, take into account all aspects and offer comprehensive solutions.

1991
TART is founded

1993
production of packaging materials started

2001
the first subsidiary abroad opened

2007
one billion turnover achieved

2013
TART expanded with export packaging division

2020
exporting to Africa and the USA started

We have perfected the packaging process

Each of your products travels a long way before they reach their destination. Therefore, place them in the safety of TART packaging. Our craft is to carefully design, professionally produce and reliably deliver packaging solutions. We are experts in packaging solutions – and have been for more than 30 years.

We will take care of your product perfectly

Focus on the essence of your business and leave the concern for packaging to us. Thanks to the sophisticated and never-ending customer care process, we always find the optimal solution.

Analysis

We want to get to know you and your product. It's the only way to find out exactly what you need.

Development and design

Each product is unique and the packaging must match this. We always come up with the optimal solution in our development centres.

Production

Packaging and packaging materials are produced in our own production plants. Therefore, we can guarantee their top quality.

Logistics

We plan logistics according to customer requirements. We will deliver everything necessary at the right time to the agreed place. Always.

Services

Do you need to construct the packaging? Do you need to pack the products straight away? Do you need to train the employees? Our customer care does not end with the production of packaging.

“We will show you elegant and innovative solutions”

“We have put together a wide range of services for you”

Packaging²

We not only offer first-class packaging, but we also provide comprehensive service. Therefore, services facilitating work and reducing costs are an integral part of our offer. We are thus creating a whole new dimension of industrial packaging.

- Analysis of the packaging process
- Development of packaging
- Packaging testing
- Kitting
- Just In Time
- Storage and logistics
- Export packaging
- Handling
- Training

We are manufacturers!

Our strength is that we use our own production plants to produce the packaging and packaging materials. We produce packaging at the highest level that will 100% protect your products, facilitate their handling and storage. And it does not matter if it is foil, box, filling system, wooden box or returnable packaging. We always use quality and proven materials. In addition, we use our know-how, many years of experience and meticulous work to produce the perfect packaging.

Keeping up with the future

We never rest on our laurels. We constantly invest in our production facilities, educate our employees and follow the latest trends. As part of our own research and development, we continue to look for new, better packaging and packaging materials. We do all this in order to always be able to produce modern packaging solutions that meet even the most demanding requirements of our customers.

“Packaging is born in our company”

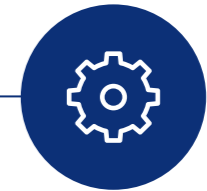

“We are a well-coordinated orchestra”

We are well tuned

At TART, we can do a lot by effectively organising work, employees and resources into **seven divisions**. Production of multilayer foils, installation of packaging lines, application of migration corrosion inhibitors or development of custom packaging – **nothing is impossible for us!**

We do not only offer one universal product, but we always choose an individual approach and a unique solution. Thanks to specialists for every field of industrial packaging, we are able to fulfil all our customer wishes: **precisely and comprehensively.**

Packing Machines Division

Complex Packaging Division

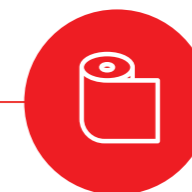

Export Packaging Division

Envira Compostable Materials Division

Anticorrosive Materials Division

Packaging Materials Division

Thermo-reflective Films Division

Packaging Materials Division

Everything in the world can be packed perfectly. In addition to the common types of packaging that we have in stock at all times, we produce any packaging tailored to your needs. Material, size, colour or design – in short, infinite combinations. You can always find the best packaging in TART.

We are meticulous on packaging

We make most of the packaging ourselves, which allows us to take a good look at its quality and design. We control production costs and availability.

We are really strong at

Own production

Fast delivery

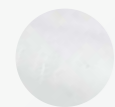

Tailor-made advice and packaging

1000+

More than 1,000 items in stock

You can find all packaging at TART

Stretch film

Bubble wrap

Polyethylene foils

Polyolefin foils

Packaging adhesive and technical tapes

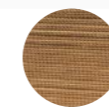

Binding tapes

Foam polyethylene

Filling and cushioning systems

Teflon materials

Cartonplast

Cardboard and cartons

Paper products

Polystyrene packaging

Nolco-flex

Wooden packaging

“Quality-polished packaging”

(Not)popping since 1998

We are the largest producer of bubble wrap in Central Europe. And it is a real alchemy! Its construction consists of a combination of unique formulas and the use of nanotechnology on state-of-the-art machines. The result is a **BUFO® barrier** with extraordinary properties, which consists of many microlayers. That is why the air does not just escape from it. It takes a lot of strength to pop this bubble wrapping.

High quality, low cost

We supply packaging of all kinds, shapes, sizes and materials. Box, tape, crate or foil? With TART, you will immediately find the right and cheapest solution. So, there is no worry or stress for you, just carefully wrap the product and get it safely on route.

Packing Machines Division

With our machines that are compatible with all types of packaging, you can pack anything. We stock machines for different packaging needs: from simple hand-held units to fully automated packaging lines.

The ingenious solution lies in technology

Our most powerful helpers are automated packaging machines and lines. They can be incorporated directly into the production line and will do all the work for you.

- They have a high capacity
- They can be tailored to your needs
- They offer a wide range of packaging
- They work quickly, cheaply and reliably

“Let people create and machines work”

Effectively, economically, energy-efficiently

Waste not want not. And if you use packing machines, you waste even less! Packaging machines and lines consume less packaging material than is usually used in hand-packaging. Most importantly, **each of our machines significantly reduces labour costs and therefore your money.**

What we can help you with

Tailor-made advice and solutions

Professional installation and testing

Operator training

Complete warranty and post-warranty service

Our offer of packaging machines

- + Packing lines
- + Wrapping machines
- + Strapping machines
- + Sacking machines
- + Foil packaging machines
- + Gluing machines
- + Welding machines
- + Palletising machines

Complex Packaging Division

The leading division within industrial packaging. The most demanding packaging solutions are created right here. We develop and produce original packaging for specific products. We are strong mainly in the automotive, electrotechnical and engineering industries.

Perfection is all about the detail

TART packaging solutions will meet your expectations:

- Ensure perfect protection for packaged products
- Guarantee long service life and durability of packaging
- Allow easy handling
- Reduce transport or storage costs
- Allow easy recyclability

“Dream packaging under your baton”

Unique V.I.C.O.® system

Our production meets the requirements of the 21st century. **V.I.C.O.®** (Value Inside Checkpoint Outside) - is the returnable packaging system. V.I.C.O. returnable packaging system guarantees material and time savings, faster product transport and significant reduction of waste production.

We received the **Packaging of the Year** award for two packaging solutions using the V.I.C.O.® system.

The packaging production process is all under our direction

What types of solutions do we offer

Analysis

Design and development

Quality testing

Own production

- | | | |
|-----------------------------------|------------------------------|------------------------------|
| + Returnable packaging | + Sewn inserts and packaging | + Cardboard boxes |
| + Plastic boxes | + Metal structures | + Blisters |
| + High-volume boxes | + Wooden packaging | + Euro crates |
| + Fittings and cushioning inserts | + Screens and grids | + Complex designed packaging |

Export Packaging Division

Imagine an extreme dimension shipment that is the maximum possible weight and it needs to be transported halfway around the world. In the export packaging process, we take into account many different factors, but there is always one single goal: the goods must arrive at their destination in perfect condition under any circumstances.

We pack, load and transport

We will design, manufacture, pack and take away. There is only one thing left for you – to deliver the product you need to transport. We will figure out everything else.

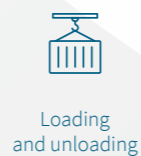

Foils that even surpass steel

Mi 24 Combat Helicopters of the Czech Army are safe under our wing. We have provided these machines with several years of protection against corrosion, weather and dust with our special packaging. And if the order is given, they are immediately ready for action!

We offer comprehensive service

By road, rail, water or air

“So that your business doesn't seize up”

Anticorrosive Materials Division

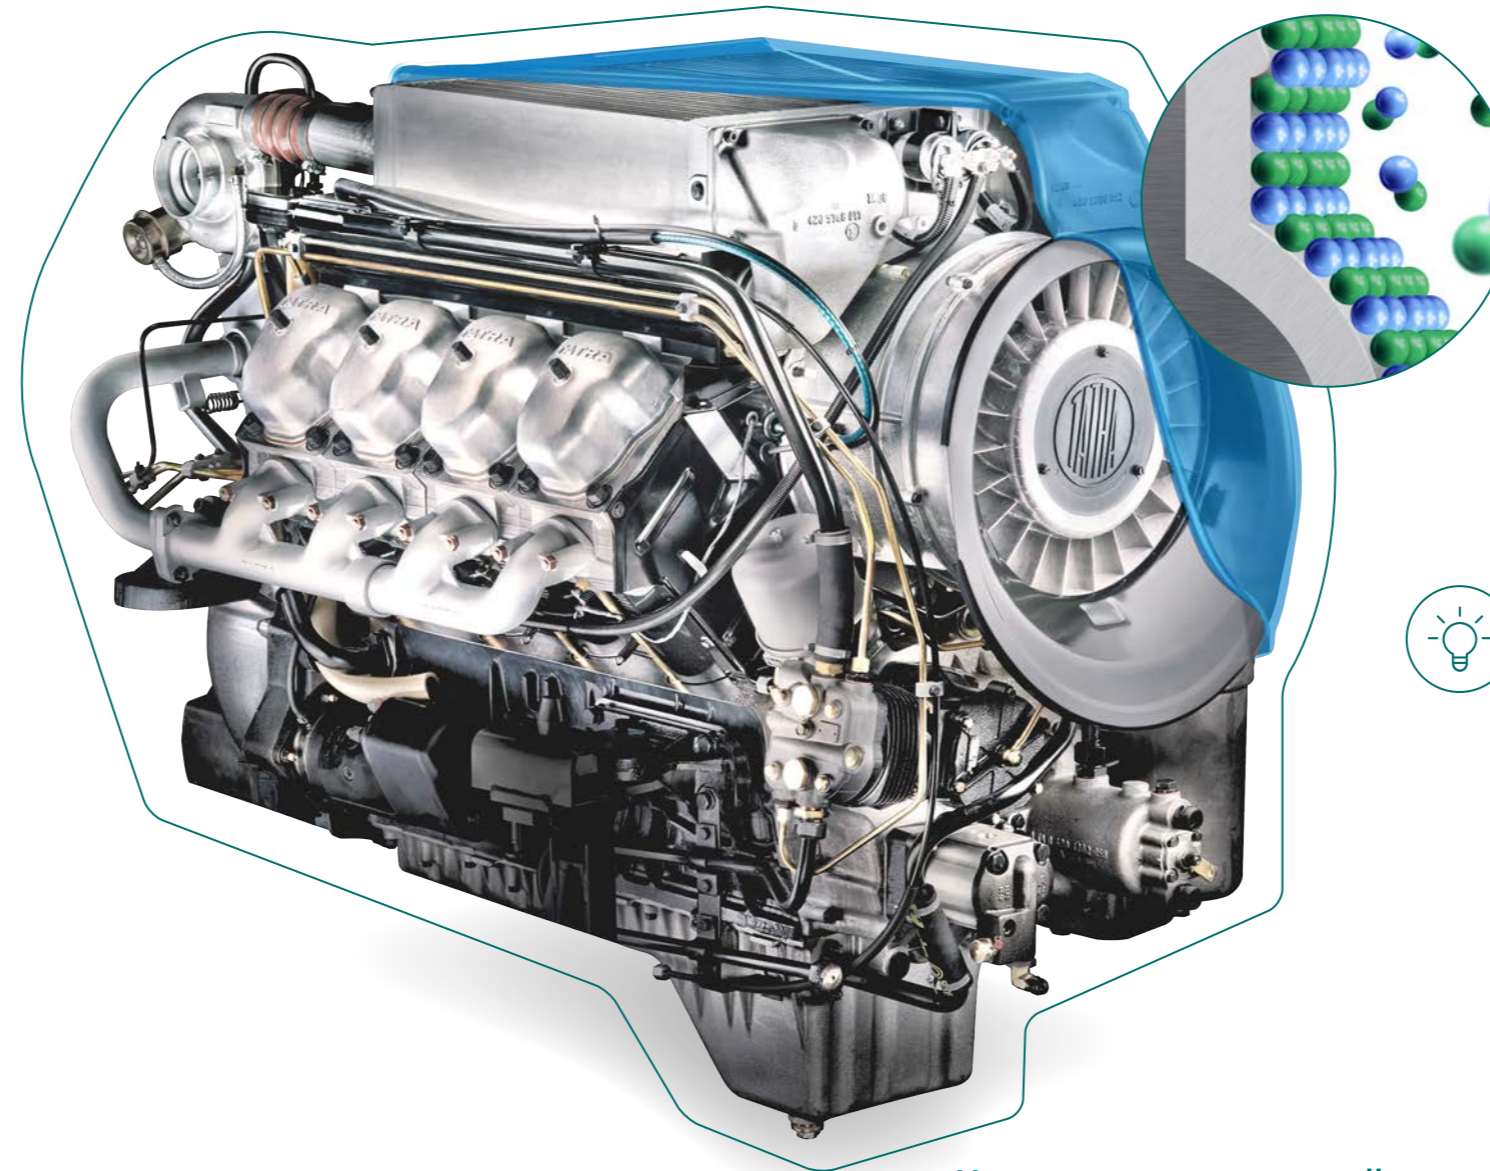

What happens to the submachine gun left open to the wind and rain? It corrodes! All industries have the same enemy. Corrosion affects a variety of types of metals used, but it is also affected by the way they are processed, used or exposed to aggressive environment.

We have a patent to fight corrosion

We are the exclusive supplier of anticorrosive **VpCI**[®] Cortec products[®] for the Czech Republic and Slovakia.

The following sectors work with us:

- mechanical engineering
- petrochemical industry
- metal processing industry
- telecommunication
- electronics industry
- building industry
- automotive industry

Win the battle against rust with VpCI[®] corrosion inhibitors

The main weapon in the fight against corrosion is migratory **corrosion inhibitors of VpCI**[®] (Vapor phase Corrosion Inhibitors). Microscopic particles create a thin protective shield on the metal surface – even in places where normal protection cannot reach.

Outsmart the problem

Regular preventive use of Cortec products[®] increases the life of machines. Secure their faithful services with corrosion inhibitor products. Production will go smoothly without unnecessary downtime.

We offer comprehensive service

Client support and consultancy

Quality testing

Training

Many ways to protect, equally great result

- | | |
|-------------------------------------|--|
| + Anticorrosive packaging materials | + Additives to coatings |
| + Anticorrosive preservatives | + Metalworking emulsion |
| + Cleaning and degreasing agents | + Anticorrosive coatings |
| + Rust removers | + Migratory corrosion inhibitors for reinforced concrete |
| + Additives for operating fluids | + Moisture displacers |

SUNFLEX[®] Division

What do thermos, space suit and SUNFLEX foils have in common? They reflect heat and thus insulate. In winter, SUNFLEX thermo-reflective film[®] reflects radiant heat back into the interiors preventing it from escaping. On the contrary, in summer, it protects indoor spaces from overheating.

Save costs with thanks to the unique technology

Thermo-reflective building foils SUNFLEX[®] are modern solutions within building insulation systems and contribute to savings in heating or air conditioning costs. SUNFLEX[®] foils can be used literally throughout the whole house: from the base plate to the roof.

Our guarantee

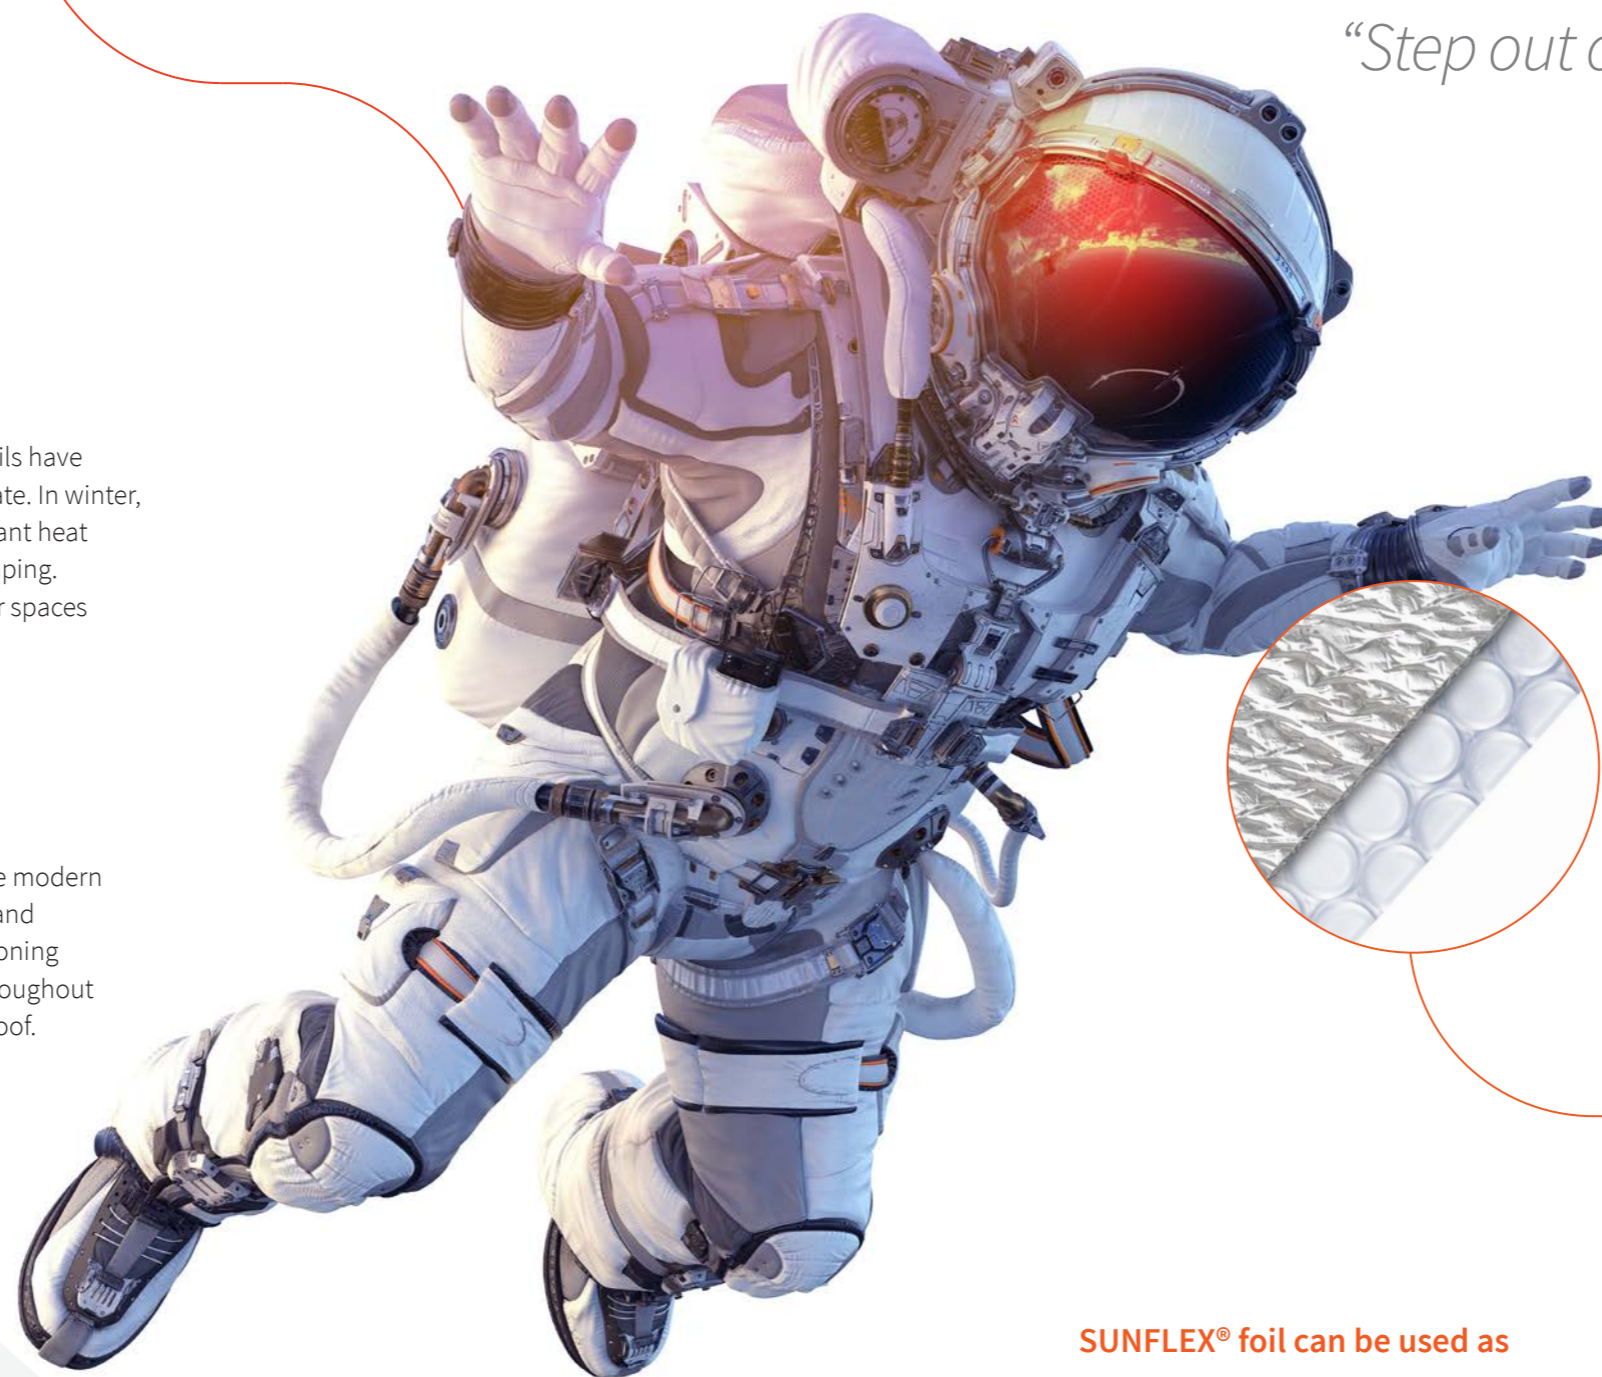

We are manufacturers

Client support and consultancy

Cost savings

“Step out of the shadows with us”

Thermo-reflective foil

SUNFLEX[®]

100%
vapour-sealed barrier

95%
reflection of thermal radiation

20%
cost savings

SUNFLEX[®] foil can be used as

- + Attic, roof and ceiling insulation
- + Walls and floors insulation
- + Under underfloor heating insulation
- + Pipe insulation
- + Vented façade insulation
- + Reflecting plates behind the radiator

“We care about the future”

We take sustainable development seriously

We preserve nature for future generations! For us, protecting the environment is not just a phrase, but a real goal. That's why we are reducing the carbon footprint and all other possible impacts on nature in many different ways:

Research and development – We open doors wide to innovation. We try new formulas and production processes; we develop new packaging designs – all in order to reduce the amount of material whilst maintaining the top quality of the packaging. For example, we produce packaging foils in half the thicknesses than is usual, but they are still the same strength.

Sophisticated logistics – One vehicle, several shipments. Transport has a big impact on the carbon footprint so we try to make it as efficient as possible. Carefully thought-out logistics enables us to reduce the negative environmental impacts of transport.

Returnable packaging system – No unnecessary waste. We produce reusable packaging that can be used over and over for many months and years. It can be easily folded thus taking up much less space in vehicles.

Use of secondary raw materials – The days of secondary raw materials in our country are numbered. For the production of our packaging, we use over 400 tons of recycled paper or plastic waste per year.

Recycling – All our packaging is recyclable. After they have reached the end of their life, another product will be made from them.

Envira®

100% compostable packaging

They have grown in the field and they are going to go back to the field. Environmentally friendly Envira® packaging is produced purely from potato or corn waste starches. They also have a better appearance and mechanical properties than polyethylene materials. And once they have fulfilled their purpose, they do not contaminate nature with microplastics. They compost down into pure biomass which then serves as a fertilizer for other crops.

Compared to plastic packaging, Envira® products have many advantages:

- produced from renewable resources with OK compost certificate
- meet the environmental standard ČSN EN 13432
- prevent moulding of food and prolongs its lifespan
- absorb odour
- do not burden nature and promote sustainable development

Quality verified by regular clients ...

Satisfied clients are proof of our art of packing. Without them, TART packaging would be meaningless. And without our solutions, they would not be able to deliver their goods to their customers. It is our clients who create TART packaging stories. Throughout Europe and beyond.

... wherever they are

*“If you're looking for a reliable partner,
you have just found us!”*

“TART’s vision is to guarantee reliability and quality to our partners, and stability and meaningful work to our employees. Our mission is to provide professional product protection solutions for distribution.”

Michal Hort, Company Director
